

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): An information processing system comprising:
a remote controller terminal; and
an information processing device, ~~said information processing system~~ wherein[:],
said remote controller terminal includes

a wireless telephone mechanism configured to communicate via a wireless
telephone network,

a first wireless communication means for performing wireless communication
with said information processing device,

an operation means for entering a command for displaying [[at]] a least menu
~~items~~ item of said remote controller terminal[,]] and for entering a command for
requiring a function item of said information processing device and for selecting
[[the]] said function item from among a plurality of said function items,

first control means for controlling said wireless communication means to send
a first command including a first authentication ID inherent to said remote controller
terminal for requiring said function item and sending a second command for requiring
further information of said function item according to operation of said operation
means, and

display means for displaying said menu ~~items~~ item, said function item and said
further information, and
said information processing device includes

second wireless communication means for performing wireless
communication with said remote controller terminal, and

second control means for controlling said second wireless communication means to send the function ~~items~~ item when the second control means determines that said first authentication ID is identical to a second authentication ID stored in said information processing device and further information to said remote controller terminal according to said first command and said second command transmitted from said remote controller terminal.

Claim 2 (Canceled).

Claim 3 (Currently Amended): The information processing system according to Claim 1, wherein said operation means is a jog dial for selecting ~~[[the]]~~ said function item out of the plurality of said function ~~items~~ item by a rotation operation and for fixing a selection of ~~[[the]]~~ said function item by a pushing operation.

Claim 4 (Currently Amended): The information processing system according to Claim 3, wherein said display means displays ~~[[the]]~~ said plurality of said function ~~items~~ item as a scroll-display in accordance with ~~[[the]]~~ said rotation operation of said operation means, and also displays a function item that is a candidate for selection.

Claims 5-12 (Canceled).

Claim 13 (Currently Amended): A remote controller terminal comprising:
a wireless telephone communication mechanism configured to perform communication via a wireless telephone network;

wireless communication means for performing wireless communication with an information processing device;

operation means for entering a command for displaying ~~at least a menu items~~ item of said remote controller terminal, and for entering a command for requiring a function item of said information processing device and for selecting ~~[[the]]~~ said function item from among a plurality of said function items; and

control means for controlling said wireless communication means to send a first command including a first authentication ID inherent to said remote controller terminal for requiring said function item and sending a second command for requiring further information of said function item according to operation of said operation means.

Claim 14 (Canceled).

Claim 15 (Currently Amended): A remote controller terminal according to Claim 13, wherein said operation means is a jog dial for selecting ~~[[the]]~~ said function item out of ~~[[the]]~~ said plurality of said function ~~items~~ item in accordance with a rotation operation and for fixing a selection of ~~[[the]]~~ said function item by a pushing operation.

Claim 16 (Currently Amended): A remote controller terminal according to Claim 15, wherein said display means displays the plurality of said function ~~items~~ item as a scroll-display according to ~~[[the]]~~ said rotation operation of said operation means ~~by a user and remarkably and~~ displays a desired function item being selected.

Claim 17 (Canceled).

Claim 18 (New): A remote controller terminal comprising:

A wireless telephone configured to perform communication via a wireless telephone network, said wireless telephone having

wireless communication means for performing wireless communication with an information processing device,

operation means for entering a command for displaying a menu item of said remote controller terminal, and for entering a command for requiring a function item of said information processing device and for selecting the function item from among a plurality of function items, and

control means for controlling said wireless communication means to send a first command for requiring said function item and sending a second command for requiring further information of said function item according to operation of said operation means.

Claim 19 (New): A remote controller terminal according to Claim 13, wherein said operation means is a jog dial for selecting said function item out of said plurality of said function item in accordance with a rotation operation and for fixing a selection of said function item by a pushing operation.

Claim 20 (New): A remote controller terminal according to Claim 19, wherein said display means displays said plurality of said function item as a scroll-display according to said rotation operation of said operation means and displays a desired function item being selected.

Claim 21 (New): A remote controller terminal according to Claim 18, wherein said

control means for controlling said wireless communication means includes an authentication ID inherent to said remote controller terminal.
